### CREATING THE MOOD

#### CREATING THE MOOD WITH COLOUR

The colours you choose can provide emotional responses, bring out the beauty of your home, command attention or accentuate an architectural feature. Light colours suggest a quiet restful mood. Warm colours suggest cheer and cosiness. Bright colours inspire excitement, opulence, exhilaration and make excellent accent colours. Whatever your preference, create the mood you desire with thousands of colours from the **BERGER COLOUR WORLD ADVANCED TINTING SYSTEM**.

Take time to prepare your wood for painting

1. Surface preparation is probably the most overlooked part of painting wood, and in many ways is the most critical step. Paint will not fill in cracks, holes or other imperfections making it even more vital to prepare the surface properly.

2. Fill cracks, shallow scratches and gouges with appropriate wood filler. It is better to use more than not enough, as the area will need to be sanded after the wood filler has dried.

3. Remove any old, peeling or cracking paint from the surface. Sand away smaller flecks

of residual paint. Scrape away as much as possible and use a cleaning solution to remove any dust, dirt, grime and any loose paint. Rinse well. If wood has been treated with a stain or a finish, sand to achieve a sound surface for adhesion of the topcoat.

4. Berger 404 is self-priming on new wood, and whilst a primer coat will add another wear-layer to the surface, priming is not absolutely necessary except in areas prone to extreme weathering and exposure, such as wood by the seaside.

# 404

## GLOSS PAINT

- Solvent based.
